Prompts:

Find training content : Act as a Google Cloud instructor. I need to revise exam objective 1.3: 'Choosing compute resources (e.g., Spot VMs, custom machine types, and specialized workload)'. List the courses from the learning path that are most relevant to these topics.

Explain concepts: How do I secure AI using tools like Model Armor and Sensitive Data Protection?

Build a glossary: Based only on the provided sources, generate a comprehensive glossary. It should define all key Google Cloud terms, services, and acronyms related to the Professional Cloud Architect exam objectives.

Generate scenario-based questions: Based only on the provided sources, create three realistic, multiple-choice, scenario-based questions that a professional cloud architect might encounter in the exam. For each question, specify a case study to refer to. Include the correct answer and a brief explanation of each answer.
